

# Nikul Patel

U.S. Citizen | New York, NY | (845) 793-1854 | [23nikulp@gmail.com](mailto:23nikulp@gmail.com) | [linkedin.com/in/nikulpatel23](https://www.linkedin.com/in/nikulpatel23) | [github.com/Nikulp23](https://github.com/Nikulp23)

## Education

### Rensselaer Polytechnic Institute

Master of Science in Computer Science | **GPA: 4.00/4.00**

B.S., Dual Major in Computer Science & Information Technology | **GPA: 3.77/4.00**

Troy, NY

**Aug 2026**

**Dec 2025**

**Graduate Coursework:** Distributed Systems & Algorithms, Parallel Computing, Data Science, Data Resource Management

**Undergraduate Coursework:** Data Structures, Algorithms, Operating Systems, Database Systems, Artificial Intelligence

## Technical Skills

**Languages:** Java, Python, SQL, JavaScript, TypeScript, C#, C++, C

**Frameworks & Tools:** Spring Boot, React, Node.js, Express.js, .NET / ASP.NET, Flask, AngularJS, Postman, Git, Datadog

**Databases:** SQL Server, MongoDB (NoSQL), Snowflake

**Cloud & DevOps:** AWS (Lambda, S3, SNS, SQS, Secrets Manager), Azure, Docker, Kubernetes, Jenkins, GitHub Actions

## Work Experience

### Capital One

*Jun 2026 – Aug 2026*

*Software Engineering Intern — Python, AWS (Lambda, S3, SNS, SQS), Snowflake*

*Richmond, VA*

- Built a serverless, event-driven pipeline on **AWS** that syncs user entitlements from 5 vendors into Capital One's access-management platform, closing a compliance gap in third-party access tracking.
- Triggered the pipeline by subscribing an **SQS** queue to the cross-account OneLake upload-notification **SNS** topic, filtering on schema and completion events; eliminated silent message loss with 3 retries and a 14-day-retention dead-letter queue (**DLQ**).
- Provisioned **S3** and **Lambda** infrastructure as code through One Pipeline (**Jenkins**-based **CI/CD**) across Dev/QA with a dedicated least-privilege execution role backed by **AWS Secrets Manager**.
- Validated employee status against **Snowflake** via **SQL** to block inactive users from being synced, then uploaded transformed entitlement files through the AllAccess **REST API** to apply access changes.

### New York Life Insurance Company

*May 2025 – Dec 2025*

*Software Engineering Intern — Java, Spring Boot, Postman, Agile (Scrum)*

*Philadelphia, PA*

- Automated employee-leave claim approvals across 1M+ transactions by engineering 80+ **DRL** rules into a **Kogito** and **Spring Boot** decision service, core to replacing a vendor claims platform with an in-house system.
- Integrated **JaCoCo** into the **Docker** build to report **JUnit** coverage on every image build, sustaining 95%+ coverage across the decision service's 80+ rules.
- Reduced release cycle time by 20% with automated **Postman** API test suites across integration and regression paths, catching defects before deployment.

### Consolidated Edison Company of New York, Inc.

*May 2024 – Apr 2025*

*Software Engineering Intern — C#, .NET, SQL, AngularJS, TypeScript*

*New York, NY*

- Cut manual processing time by 90% with a full-stack Outage Scheduling System, replacing grid operators' download-and-Excel reporting workflow with automated report generation.
- Enabled equipment-conflict detection for planned outages by optimizing **SQL Server** views and building an **ASP.NET** ingestion pipeline that cut multi-table query latency.
- Informed load planning and outage scheduling across 50+ substations with **C# ASP.NET** RESTful services that analyzed 40,000+ outage records.

## Leadership & Open Source

### Teaching Assistant — Rensselaer Polytechnic Institute

*Aug 2023 – May 2026*

- Mentored 500+ students across Computer Science I (**Python**), Data Structures (**C++**), and Database Systems (**SQL**) through lab sections, office hours, and one-on-one debugging sessions.

### Software Lead, Rensselaer Center for Open Source — React, Node.js, MongoDB, CI/CD, Selenium

*Dec 2022 – Apr 2025*

- Led a 6-engineer open-source team for 2+ years building CartX, a **React** / **Node.js** platform that compares product prices across stores, owning code reviews, **CI/CD**, and sprint planning.
- Instrumented CartX's **Node.js** backend with **Datadog APM** and custom metrics, building dashboards and alerts that detected failures in the 100K+/day ingestion pipeline, preventing data loss.

## Projects

### Finance For All — 1st Place, NSBE & SHPE Hackathon — LLMs, Azure, React, Express.js

*Nov 2023*

- Built a full-stack **React** / **Express.js** platform that integrated **Google Gemini** to compare financial products across major banks (JPMorgan Chase, Capital One, and American Express) and surface personalized recommendations.

### EcoVision — Best AI Hack, HackRPI — OpenAI, OpenCV, Python, React

*Feb 2024*

- Classified recyclables at 95% accuracy using **OpenCV** computer vision with **OpenAI**-powered sorting insights.
